Dan Akroyd

 Cut Through

 Light Shadows (shave deeply)

 Dark Shadows (shave lightly)

 Leave Alone

# Dan Akroyd

## Instructions:

1. Use a poking tool or sharp nail to poke the design into the pumpkin's surface. Due to the detail, poke gently through the paper and about an eighth of an inch deep into the pumpkin skin, each poked dot beside the other while tracing each shape on the lines. When all lines have been traced this way, remove the paper pattern and rub a small amount of baking flour into the holes to make the design easier to see.
2. Next, use a utility knife, such as a small X-Acto blade, to precisely trace each poked line, cutting only about an eighth of an inch into the skin, not all the way through the pumpkin shell. Outlining with a blade will give the finished portrait cleaner cut lines and help you to smoothly shave out the shadow areas.
3. Carve and shave out the highlights of his glasses and then his hat. Carve out the highlight on top and below his nose, then shave this area. Carve out the area of the right cheek, carefully cutting it into smaller pieces to remove this section more easily. Shave out any shadow areas then repeat for the left cheek.
4. Cut out and shave the areas between his lips and chin. The final sections to carve and/or shave are his ears, neck, collars, tie and shoulders.

## Hints:

1. It is easier to carve portraits on larger pumpkins, the bigger the better!
2. A sturdy, U-shaped wood gouge is the perfect tool to shave layers out of the pumpkin's thick shell, and an inexpensive pumpkin saw is the best way to get all the fine areas cut smoothly.
3. For shadow areas, the deeper you shave into the pumpkin's shell, the more light will shine through those areas. Adjusting the amount of pumpkin flesh you remove will change the shadows of a carved face. Shave in more deeply for lighter highlights (shown as a medium gray on the pattern), and just barely remove the pumpkin flesh to create a deeper shadow (shown as a dark gray on the pattern).
4. Remember, portraits usually have a lot of thinly cut areas, so they will deteriorate more quickly than an average carved pumpkin, usually within a few hours! Wait to carve portraits until the day you want to show them off. Give your finished carving a spray of water using a spray bottle to keep the finer lines from drying out too quickly!
5. If you want a portrait that will last for years, carve into an artificial pumpkin instead. You should still use a small pumpkin saw to cut out areas, and a utility knife to outline each section, but instead of using a wood gouge for shaving the shadows in, use a Dremel tool with a jeweler's bit instead (these may be found at your local hardware store). Be sure to use an electric light with no more than a four watt bulb for lighting!
